It is also lighter in the woods than in the open plain, and lighter in a gentle than in a strong wind. Naturally also the lower layers having to support the upper become more dense. Indeed, if enough snow accumulates, the lower layers soon approach the consistency of ordinary ice. Though most people consider snow rather a nuisance after its first beauty has disappeared, yet it is often welcomed by the farmers. Snow is a non-conductor of heat, a fact which the dwellers in Arctic regions utilize when they build houses of it. When the earth is coated with snow, it prevents frost from penetrating into the ground and injuring the plants. Moreover, if the snow melts slowly, the greater Fig. 34.
